Figure 13 is a diagram illustrating the output of the system for four different states (State 0, State 1, State 2, and State 3). The diagram shows the input data (Input D3:0) and the resulting output (Output) for each state. The output is shown in hexadecimal format, with the first two digits representing the state and the remaining digits representing the output data. The output data is shown in a 16-bit format, with the first 8 bits representing the data and the remaining 8 bits representing the mask. The output data is shown in a 16-bit format, with the first 8 bits representing the data and the remaining 8 bits representing the mask. The output data is shown in a 16-bit format, with the first 8 bits representing the data and the remaining 8 bits representing the mask.
